**RADIO 5 LOG**, recording system audio that allows recording 24 hour channel, admits follow up of the emitted to the air, legal copy, etc... Consists of a recording module, in any Windows® compatible audio format (MP3, WAV, etc.) and a player for subsequent consultation, performs continuous recording 24 hours in blocks defined by the user. It can be installed on a network or in a central database server.

**RADIO 5 LOG** is a software developed entirely in 32 bits, whose execution platform is Windows®, supporting any compatible hardware, enabling the user to maximize performance and lower costs through greater recording time on less disk space.

**RADIO 5 LOG/1** records in simultaneous 1 stereo channel or 2 mono channels, at Windows® compatible format, accessing their posterior edition with any audio editor.

**RADIO 5 LOG/1** allows defining blocks time recording or record 24 hour blocks.

**RADIO 5 LOG/1** is an ideal system to cover multiple tasks within a station or check-up of advertising agency.

It different types of work make this product an indispensable tool when it comes to having an electronic registry of emission environment.

To news formatted radios, **RADIO 5 LOG/1** defines blocks time recordings generating complete independence between the operator and the editor, since this does not require the attention of the operator to record the news blocks that requires.

Fully configurable network and recording format full compatible with Windows® make **RADIO 5 LOG/1** a necessary tool for the audit of the emitted to the air.
